

Start of “Smartphone ATM” Service

Japan’s First Nationwide Rollout of
ATM Deposit and Withdrawal Service Using Smartphones

Seven Bank, Ltd. and Jibun Bank Corporation has begun a smartphone ATM transaction service (“Smartphone ATM”) from Monday, March 27, 2017 for making deposits and withdrawals at Seven Bank ATMs throughout Japan using a smartphone application provided by Jibun Bank (the “Jibun Bank Transaction App”). This is Japan’s first* nationwide rollout of an ATM deposit and withdrawal service for smartphones.

How to Use “Smartphone ATM” (Withdrawal)

Setting withdrawal amount on app screen

Reading QR code on ATM display

Cash withdrawal

Set the withdrawal amount on the “Smartphone ATM” menu of Jibun Bank’s app and use the smartphone to read the QR code displayed on the ATM. Then, input PIN code and withdraw cash.

Smartphone ATM is a service that enables users to make deposits and withdrawals at an ATM with only a smartphone, without using a cash card. Customers with a Jibun Bank account can use the service at all Seven Bank ATMs with the “Jibun Bank Transaction App,” without requiring procedures such as registration to use the service or downloading a special app. This service is compatible with iPhone and Android devices, and can therefore be used on virtually all smartphones.

Seven Bank also plans to provide a similar service at its ATMs for LINE Pay and Mobit, and expects an increase in the number of companies introducing the service in the future.
